In today's post, we want to share with you 2 quick ways to extract individual pages from a Word document. Sometimes, in a Word document, each page can contain completely independent content, such as a table. And you probably have to send different tables to different people. Then you will need to save each table, which is each page, as a separate file. The first thought to occur in our mind should be a classic copy-and-paste. Still, anything involving selection can be annoying sometimes, for drag and select can easily make one end without choice at all. For this reason, we recommend 2 quick methods of using a macro for this job. Method 1: Expand the current page and save it as a new document First, place the cursor on the page you want to extract. Click the Developer tab, and then click Visual Basic to invoke the VBA editor. If the Developer is not activated, simply press Alt+F11 instead. Second, go to Normal Project by clicking on it. Then click the Insert tab and select Module. Double-click the new snap-in to open the edit area. Then paste the following codes there: Sub SaveCurrentPageAsANewDoc() Dim objNewDoc as dim objDoc document as dim strFileName document as dim strFolder string as the string ' Initialization Set objDoc = ActiveDocument strFolder = InputBox (Enter the folder path here:) strFileName = InputBox (Enter the file name here:) ' Copy the current page. objDoc.Bookmarks(\Page). Range.Select Selection.Copy ' Open a new document and paste the selection. Set objNewDoc = Documents.Add Selection.Paste objNewDoc.SaveAs FileName:=strFolder & \ & strFileName & .docx objNewDoc.Close End Sub Lastly, click the Run button. Now there will be 2 entry boxes. Enter the path where you want to save the new document in the first input field. And type a new document name for the second. Method 2: Expand each page and save it as a new document The following macro allows you to extract each individual page of the document. First, press Ctrl+ Home to scroll to the very beginning of the document. Then follow the same steps in Method 1 to install and run the macro. This time replace the macro with this: Sub SaveEachPageAsADoc() Dim objNewDoc as dim document objDoc as dim nPageNumber document as integer Dim strFolder as dim objFileName as range ' Initialization Set objDoc = ActiveDocument strFolder = InputBox (Enter the folder path here:) ' Copy each page in the document paste into the new one. For nPageNumber= 1 To ActiveDocument.ComputeStatistics(wdStatisticPages) Application.Browser.Target = wdBrowsePage ActiveDocument.Bookmarks(\page). Range.Select Selection.Copy Set objNewDoc = Documents.Add Selection.Paste ' Save a new document named Page & nPageNumber and get the first 20 characters of the new document as part of the file name. Set objFileName = objNewDoc.Range(Start:=0, End:=20) objNewDoc.SaveAs FileName:=strFolder \ & Page & nPageNumber & & objFileName & .docx objNewDoc.Close objNewDoc.Close Next nPageNumber End Sub deal with Word problems There are and always will be different Word problems. It's about learning how to fix them properly. The most recommended method is, of course, to get a sophisticated Word recovery tool. You should use every minute to recover your data before it's too late. Author Introduction: Vera Chen is a data recovery expert at DataNumen, Inc., who is a world leader in data recovery technologies, including corrupt xlsx and pdf repair software products. For more information, www.datanumen.com about extracting one or more pages from a PDF using Adobe Acrobat DC. Vad du behöver Sample training files with (ZIP, 3 MB) Open the Arrange Pages tool using the link in the right pane or from the Tools hub, which is accessed at the top left. In the Open dialog box, select the sample Bodea.pdf file or other file from which you want to save one or more pages to a separate PDF. Then click Open. When you select pages to extract, you can select a single page or set of specific pages: To extract a set of consecutive pages, click the first page that you want to extract, then hold down shift (Windows and Mac), and then click the final page that you want to extract to highlight the set. To extract consecutive pages, click the page to expand, then hold down Ctrl (Windows) or Cmd (Mac), and then click each additional page that you want to extract to the new PDF. To remove pages from the original PDF after extraction, click the Delete pages after extracting check box. To extract each highlighted page as a separate PDF, click the Extract pages as separate files check box. Click the blue Extract button to create a new PDF file for the highlighted pages. When the pdf of extracted pages opens in a new tab, choose file > Save or File > Save As, and then choose the file name and location of the new file. Learn more about organizing pages in a PDF and combining files, including merging Microsoft Word, Excel, and PowerPoint files. If you need to split PDF pages in a document, you can also learn more about splitting a PDF. 1 Open Google Chrome. If your computer has Google Chrome, you can use it to create a new PDF by extracting pages from another file. You can find Chrome on the Start menu (Windows) or in the Apps (macOS) folder. 2 Press Ctrl+O (PC) or 啦 Command+O (Mac). A window opens that allows you to select a file. 3 Select the PDF and click Open. The selected file opens in Chrome. If Chrome prompts you to download or save the file instead of viewing the PDF, click Cancel, and then: click the three-dot menu in the upper-right corner of the Browser Click Settings. Under Privacy & Security, click Site Settings. Scroll down and click More Content Settings. Click PDFs. Slide the switch to Off (gray). Reopen the PDF. 4 Click the menu ⋮. These are the three dots in the upper-right corner of Chrome. 5 Click in the menu. 6 Click the drop-down menu next to Destination. It's in the upper-right corner of the print window. 7 Select Save as PDF. 8 Click the drop-down menu next to Pages. It's a menu that says All by default. 9 Select Custom and enter the pages you want to scatter. You can enter a single page number, a page range (separated by a hyphen), or multiple page numbers separated by commas. For example, to create a new PDF from pages 2 through 4, type 2 through 4. To create a new PDF from pages 1, 4, 6, and 9, you can type 1, 4, 6, 9. 10 Click Save. It's at the bottom of the window. 11 Save the new PDF. You'll be prompted (through a pop-up dialog box) to enter the file name, select the folder where you want to save it, and then click Save to complete. The new PDF containing the extracted pages is now in the selected folder. 1 Open the PDF in the preview. Preview is the default PDF viewer for macOS, so just double-click the pdf to open it in the app. You can also right-click the PDF, select Open with, and then select Preview. 2 Click the View menu and select Thumbnails. The View menu is located on the menu bar at the top of the screen. [1] 3 Select the pages you want to extract. Hold down the Command button when you click each page you want to extract. Pages that are extracted to a new PDF are highlighted. 4 Click the File menu and choose Print. The File menu is located in the upper-left corner of the screen. In the print dialog box, specify the page range that you want to print. 5 Click View Details. It's at the bottom of the window. If you don't see this button, you'll already see more details. 6 In the sidebar, select Selected Pages. It's in the Pages section. This ensures that the selected pages are added to the new file. 7 In the drop-down menu at the bottom left, select Save as PDF. It's one that says PDF by default. 8 Type a file name, and then click Save. Go to where you want to save the file, name it, and save it. That's it! 1 Go to the in your web browser. Smallpdf Split PDF opens, which can create a new PDF from selected pages. 2 Select the PDF containing the files you want to extract. You can either drag a PDF to a large purple Select Files box, or click Select Files, select a PDF, and then click Open. 3 Select Extract Pages. It's the first of two options. 4 Click the purple Extract button. All pages in the PDF appear as thumbnails. 5 Select the files you want to extract. Click each page that you want to add to the new PDF. In the upper-left corner of each selected page, the check mark. To select a page range, click the Select Ranges tab at the top of the page list, and then type a range of page numbers (separated by a hyphen, for example, 6 Click the purple Extract button. It's in the upper right corner of the page. This delivers the selected pages new PDF and make it available for download. 7 Click Download. This is the purple button to the right of the original file name. This saves the file to your computer. If prompted, select the folder where you want to save the new PDF and name it. 1 Download PDFFsam Basic from . This free open source app is available for both Windows and macOS. [2] To download the file, click the Apple Disk Image (Mac) or MSI Installer (Windows) link and save it to your computer. 2 Install the PDFFsam file. Double-click the downloaded file, and then follow the on-screen instructions to install it. 3 Open the PDFFsam file and select the Extract snap-in. If pdffsam doesn't start automatically after installation, you can find it on the Start menu (Windows) or in the Applications (macOS) folder. When you open it, click the large Extract tile in the list of options. 4 Add the PDF from which you want to extract pages. You can either drag and drop the PDF files here, or click Add, select the PDF, and then click Open. 5 Enter the page numbers you want to extract. The pages you want to extract go to extract pages blank. You can enter a single page number, a page range (separated by a hyphen), or multiple page numbers separated by commas. For example, to create a new PDF from pages 6 through 10, type 6 through 10. To create a new PDF from pages 1, 3, 6, and 14, you can specify 1, 3, 6, 14.6 Select the folder where you will save the new PDF. To do this, click Browse to the right of the empty output setting, select the folder, and then click Select Folder. 7 Enter the name of the new pdf. You can type blank in File Name Settings at the bottom. Do not worry about entering .pdf as it will be added automatically. 8 Click Run. It's in the lower-left corner of the app. When you create a new PDF, you'll see Completed at the bottom of the app above the green progress bar. Add a new question Do I need to buy Acrobat software? Not. However, Acrobat software provides additional benefits that might make it seem useful to you. Ask the question Thanks!
